

Technical Specification for Stationary VLA-Cells

1. Application

BAE SECURA OGi cells are designed for reliable operation, long service life, high discharge currents during short discharge times and capacitive loads over longer discharge times.

They are used as stand-by source in power supply stations, transforming stations, UPS-stations and emergency light equipment.

Due to the used grid plate design with high mass of lead and circular bars a long operational life and a very good high-current-performance can be assured. The slick-walled containers and the vertical arranged plates offer a high power density related to a small foot-print. The transparent container allows an easy visual access and simplifies service and maintenance significantly.
